Methodological Approaches to System Experiments

International Summer School

Objectives

Strengthening the scientific nature of system experiments through a solid methodological corpus

Learning how to build an experimental design taking into account the objectives, hypotheses and how the data will be analysed

Sharing solutions to overcome problems usually encountered in system experiments (e.g. lack of replicates, changes in decision rules over time, interactions among individual plots...)

Building an international culture on system experiments

Public: French and international researchers, engineers, PhD students involved in the design, monitoring and exploitation of systems experiments

Language : English
